Summary

Professional Web developer with 9 years of experience. Specialize in cloud-based architecture design development and full-stack software development. Successfully collaborate in team environments.

Professional skills

- AWS Cloud-based development and architecture
- Server-side: NodeJS, PHP (Laravel 5, Yii/Yii2, Codeigniter, Symfony, ZF3), Golang, Ruby
- Client-side: JS (AngularJS/Angular 2+, ReactJS, VueJS, jQuery), HTML5
- Databases: MySQL, PostgreSQL, Redis, MongoDB, Firebase/Firestore, ElasticSearch, DynamoDB, Memcached
- Services integrations: Salesforce, Twilio video and SMS, Ziggeo, Stripe, Paypal, DHL, FedEx, Auth0, Google maps
- SaaS and other technologies:
    - Docker + Docker compose
    - TDD
    - System administration (Linux)
    - CI/CD (Travis, Jenkins, Bitbucket pipelines)
- Experienced in the mentorship of new-comers and interns
- Participated in technical interviews

Employment History

Freelance   Jul 2011 - Apr 2014

ITG   Apr 2014 - Mar 2016

Clockwise Software   Mar 2016 - present

Projects

The project is currently under NDA   2016 - present
Automated platform for attorneys and clerk officials allowing to file case materials into the state court system, tracking systems, and online notary. USA market only.

Role: Architect, tech lead, developer

Technologies: PHP (Codeigniter), MySQL, Angular, VueJS, Firestore/Firebase, NodeJS, AWS Lambda, S3, API gateway, Elastic Beanstalk

Responsibilities:
- Requirements analysis and clarification
- Estimation, prioritization, and distribution of tasks
- Project architecture development over AWS stack
- Code development
- Development build and deployment scripts
- Development parts of front-end and back-end functionality

The project is currently under NDA 2018
A platform for delivery systems to abstract and automate delivery processes with 3d party delivery providers (FedEx, Postmate, DHL) and automated scheduling and tracking system for drivers.

Role: Frontend and backend developer

Technologies: NodeJS + Serverless, MongoDB, DynamoDB, Golang, MySQL, Angular 5

Responsibilities:
- Architecture development
- Tech management of developers team
- 3d party API integration
- Backend services development
- Frontend development
- Support and bug fixing, unit tests
- Estimation, scoping, release planning
- Work on deployment scripts and packaging

Lafka 2016
Mobile application for purchasing and delivering products from the nearest shops

Role: Backend API developer

Technologies: PHP (Yii2), MySQL, Apache

Responsibilities:
- Requirements analysis and clarification
- Estimation, prioritization, and distribution of tasks
- Code development
- Deployment and server maintenance

Education

Prydniprovska State Academy of Civil Engineering and Architecture 2008 - 2013
Master's degree in Automation Engineer Technology

Additional education

LevelUp courses Feb 2013 - Sep 2013
PHP, JavaScript, and MySQL

RubyGarage courses April 2015 - July 2015
Ruby and Ruby on Rails, TDD

Languages

English - professional working proficiency
